SUMMARY

Full-stack developer across the whole stack — frontend, backend, mobile and the infrastructure underneath. Co-founded LHBSoft and architected ReForge, a SaaS platform for car repair shops, from an empty repository to a revenue-generating product on web, iOS and Android. Now deepening cloud expertise at SoftwareOne, working toward carrying a project from architecture to production single-handedly.

EXPERIENCE

Fullstack Engineer · SoftwareOne — 05/2026 — Present · Sofia

- Application development in Python against REST APIs and SQL databases.
- Focused on AWS and cloud cost optimisation.

Co-founder & Lead Engineer · LHBSoft — 09/2025 — 05/2026 · Sofia

ReForge — SaaS platform for car repair shops, owners and mechanics · built in parallel with a full-time role at DSK Bank

- Architected the product from an empty repository to a revenue-generating service, live on web, iOS and Android.
- Designed and built the Python/FastAPI backend: 338 REST endpoints across 172 modules, raw asyncpg over PostgreSQL, JWT auth across six user roles, AES-256-GCM encryption of personal data at rest, Stripe billing, and realtime WebSocket fan-out via Postgres LISTEN/NOTIFY.
- Led the migration of the API off Next.js onto a modular FastAPI service, with a contract test that fails the build if any route ships without an auth dependency.
- Built the Flutter mobile app end to end — 93 screens, EN/BG localisation, biometric login, push notifications — and shipped it to the App Store and Google Play.
- Ran the stack on AWS EC2 with Docker Compose, 445 pytest tests and Sentry tracing; integrated an LLM agent with read/write tools over shop data plus invoice and registration scanning with structured field extraction.

Junior BAW Developer · DSK Bank — 11/2023 — 05/2026 · Sofia

- Automated business processes on IBM Business Automation Workflow, cutting manual handling and customer waiting times.

JavaScript Developer · Freelance — 07/2023 — 09/2023 · Sofia

- Built a site for a Twitch streamer to grow revenue and audience — donation and influencer links, merchandise, embedded video and community challenges.

SELECTED PROJECTS

Predict Player Performance — Python · pandas · NumPy · scikit-learn · Streamlit

Clustering and regression predicting competitive player performance; dataset gathered by a Discord bot I wrote. The interest it drew renewed player activity, producing more data to model on.

Thracian Noble — Python · discord.py · Gemini API · Docker · pytest

AI-assisted Discord bot serving game statistics, recommendations and moderation to a gaming community.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, Dart, SQL
Backend	FastAPI, REST API design, Pydantic, asyncpg, PostgreSQL, WebSockets, Stripe
Mobile	Flutter, Firebase Cloud Messaging, App Store & Google Play releases
Frontend	React, Next.js, Tailwind CSS
Cloud & DevOps	AWS (EC2, cost optimisation), Docker, Linux, CI/CD, Sentry
Testing	pytest, unit and integration testing
Data & AI	pandas, NumPy, scikit-learn, LLM tool-calling agents

EDUCATION

Alpha JavaScript Track
Telerik Academy · 01/2023 — 06/2023

B.Sc. German Language and Literature
New Bulgarian University · 2017 — present

Industrial Electronics
VHS of Electronics "John Atanasov" · 2013 — 2017

CERTIFICATIONS & LANGUAGES

Meta Front-End Developer
Coursera
