PROFILE

Full-stack developer across the whole stack — frontend, backend, mobile and the infrastructure underneath. After Telerik Academy I joined DSK Bank, moving from Junior to Software Engineer, then co-founded LHBSoft and architected ReForge from an empty repository to a revenue-generating product on web, iOS and Android. Now at SoftwareOne, deepening my cloud expertise so I can carry a project from architecture to production on my own. I love building things.

EXPERIENCE

Fullstack Engineer 05/2026 – Present
SoftwareOne SOFIA, BULGARIA

- Application development in Python against REST APIs and SQL databases.
- Focused on AWS and cloud cost optimisation.

Co-founder & Lead Engineer 09/2025 – 05/2026
LHBSoft — built in parallel with my role at DSK Bank SOFIA, BULGARIA

- Architected ReForge, a SaaS platform for car repair shops, from an empty repository to a revenue-generating product live on web, iOS and Android.
- Built the Python/FastAPI backend: 338 REST endpoints across 172 modules, raw asyncpg over PostgreSQL, JWT auth across six user roles, AES-256-GCM encryption of personal data at rest, Stripe billing, and realtime WebSocket fan-out via Postgres LISTEN/NOTIFY.
- Led the migration of the API off Next.js onto a modular FastAPI service, with a contract test that fails the build if any route ships without an auth dependency.
- Built the Flutter mobile app end to end — 93 screens, EN/BG localisation, biometric login, push notifications — and shipped it to the App Store and Google Play.
- Ran the stack on AWS EC2 with Docker Compose, 445 pytest tests and Sentry tracing; integrated an LLM agent with read/write tools over shop data plus invoice and registration scanning with structured field extraction.

Software Engineer 05/2025 – 05/2026
DSK Bank SOFIA, BULGARIA

- Refactored and optimised legacy services, reducing resource usage by over 10x and significantly improving performance and scalability.
- Conducted technical interviews, contributing to hiring decisions and team growth.
- Collaborated in feature planning and optimisation, ensuring alignment with business goals and technical feasibility.

Junior Software Engineer 09/2023 – 05/2025
DSK Bank SOFIA, BULGARIA

- Developed and maintained a loan application, with a focus on reliability and availability.
- Resolved production incidents in Remedy.
- Used JavaScript, JSON, XML and SQL throughout the development process.

PROJECTS

Predict Player Performance 06/2025 – 08/2025
Python · pandas · NumPy · scikit-learn · Streamlit

- Clustering and regression pipeline ranking tournament players on performance metrics, using RandomForestRegressor tuned with GridSearchCV and 5-fold cross-validation. The dataset came from a Discord bot I wrote for the purpose.

Thracian Noble — Discord bot with AI integration 10/2023 – 11/2024
Python · discord.py · Gemini API · Docker · pytest

- A side project that got me interested in AI. Hitting the limits of prompt injection through an API pushed me into learning how training and fine-tuning actually work.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, Dart, SQL
Backend	FastAPI, REST API design, Pydantic, asyncpg, PostgreSQL, WebSockets, Stripe
Mobile	Flutter, Firebase Cloud Messaging, App Store & Google Play releases
Frontend	React, Next.js, Tailwind CSS
Cloud	AWS (EC2, cost optimisation), Docker, Linux, CI/CD, Sentry
Data & AI	pandas, NumPy, scikit-learn, LLM tool-calling agents

EDUCATION

Software Engineering | Telerik Academy JS Graduate
Telerik Academy · Sofia
01/2023 – 07/2023

Electronics
VHS of Electronics "John Atanasov" · Sofia
09/2013 – 08/2017
